Next Iteration(Update D_t)
Update GP
GP Posterior
Posterior Mean: $\mu_t(x)$
Posterior Std: $\sigma_t(x)$
INITIAL SAMPLES
Initial Data D_0
RL Action A1
Measure f(x).
Black-Box Oracle
State & Action Agent
RL State:
$s_t = [\mu, \sigma, E]$
Action = X_t
Evaluate f(x)
Clip
Train EBM
RL Action A2
Update Reward
$Reward = f(\mathbf{x}t) - \lambda E\theta(\mathbf{x}_t)$
$\pi_\phi \leftarrow$ optimize via RL objective
Reward & Policy Agent
EBM for Global Converge
Short Run MCMC for Global Energy.
Reward & New Policy
Energy Based Model
Dynamic DataLoader
